

HOW TO SCULPT A DRAGON/DEMON WINGS *by Gael*

Stage1:

Build the shape of the wings with iron wire (with soft soldering).

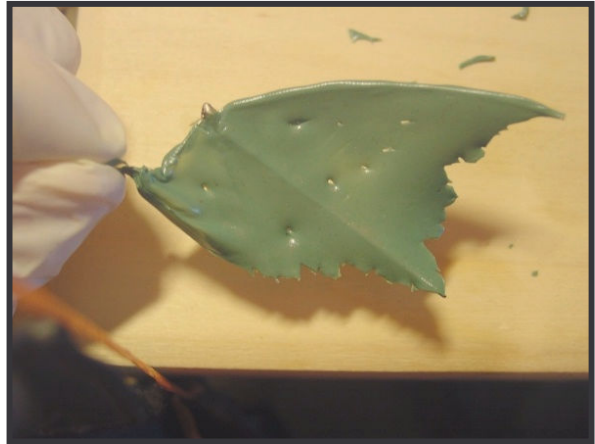

Stage2 :

Lay out a sheet of GS (use some talcum). It's more easy if you use a mix of 40%(yellow)-60%(blue).

Add some holes and slits. Wait more 40 minutes (before the GS will be too soft) and put the sheet on the shape.

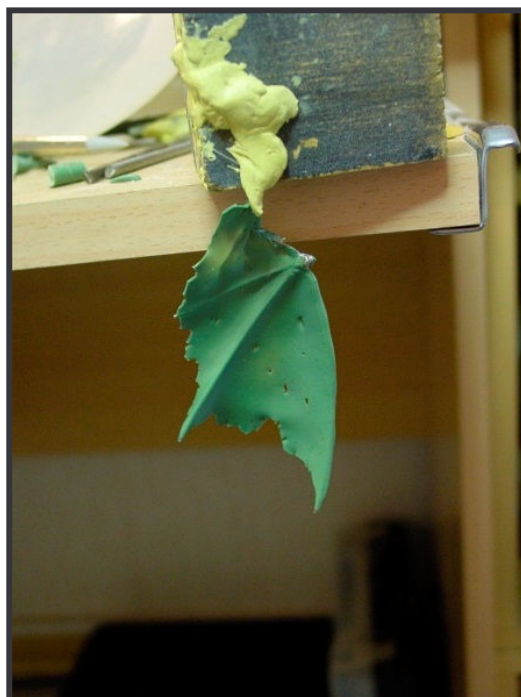

Stage 3 :

With a finger (with a glove to not have foot print) or a clayshaper give the form of the wing.

Let the wing dry.

Stage4 :

Look if the the wing have the good form and made the corrections.

Add bones and muscles.

Stage5 :

Add the last details, and increase a little the thickness of the wings.

It's finish :D
